

**Q1. Choose the correct answer:**

- i) Early men ate \_\_\_\_\_.  
 a) Ice cream                      b) raw food                      c) fried rice
- ii) Archeologists dig \_\_\_\_\_.  
 a) Earth                              b) Well                              c) garden
- iii) Early people learnt how to make \_\_\_\_\_.  
 a) Chocolates                      b) fire and tools                      c) trees
- iv) Anthropologists study \_\_\_\_\_.  
 a) Biology                              b) Living conditions of ancient people                      c) Mathematics

**Q2. Answer the following:**

- a) How was fire discovered?
- b) What are fossils?
- c) Define Anthropologists.
- d) Who are Archeologists?

**Q3. Colour the things related to the early man.**

Bows and arrows	Guitars	Sledge
Sydney	Fossils	Cricket
Rope made of plant fiber	Books	Clay pots
Queen Elizabeth	Roller	Hunting
Toto	Candies	cave

**Q4: Number the different stages of the wheel invention and then match them with the relevant picture (draw lines from the box to connect to the correct picture).**

Soon they discovered that the rollers, which carried the sledge, became grooved with use.	They began to place runners under heavy load, which they discovered, would make it even easier to drag the load. This was the invention of the sledge.
The rollers were changed into wheels. The two wheels were then joined by a rod called an axle. The invention changed human life altogether.	Early man placed rollers beneath heavy objects that they could be moved easily.
They began to combine the rollers and the sledge.
